Aida Bargues Tobella

My research interests are broad and multidisciplinary and revolve around the restoration and sustainable management of tropical dryland ecosystems, including forests and agroecosystems. My primary research interest is in the potential of tree-based restoration and agroforestry to support and enhance the provision of ecosystem services and contribute to sustainable development, with a focus on dryland sub-Saharan Africa. I am particularly interested in understanding how changes in tree cover and land use in drylands affect soil and land health and the provision of ecosystem services, in particular hydrologic services.
